Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (currently amended) A method executed by at least one computer processor for providing metadataselected advertisements, comprising:

receiving <u>at user equipment</u> media comprising at least one object, metadata associated with the <u>at least</u> one object and containing a description of the <u>at least one</u> object, and metadata associated with a plurality of advertisements related to the <u>at least one</u> object;

receiving at the user equipment the plurality of advertisements related to the at least one object;

displaying the media and the <u>at least one</u> object on a viewing device at the user equipment;

receiving a user selection of $\underline{\text{one of}}$ the $\underline{\text{at}}$ least one object displayed on the viewing device;

processing metadata associated with the object selected by the user;

comparing at the user equipment the metadata associated with the object selected by the user with the metadata associated with the plurality of advertisements related to the object; and

selecting at the user equipment one of the plurality of advertisements related to the object based on the comparison.

2. (previously presented) The method of claim 1 further comprising displaying the selected advertisement on the viewing device.

- 6. (currently amended) The method of claim 1 wherein the metadata associated with the at least one object and the metadata associated with the plurality of advertisements are received on a broadcast channel on which the media is also received.
- 7. (currently amended) The method of claim 1 wherein the metadata associated with the <u>at least one</u> object and the metadata associated with the plurality of advertisements are received on a separate broadcast channel from the media.
- 8. (currently amended) The method of claim 1 further comprising storing the metadata associated with the at least one object and the metadata associated with the plurality of advertisements.
- 9. (currently amended) The method of claim 8 wherein the metadata associated with the <u>at least one</u> object and the metadata associated with the plurality of advertisements are stored on a single storage device.
- 10. (currently amended) The method of claim 8 wherein the metadata associated with the <u>at least one</u> object and the metadata associated with the plurality of

advertisements are stored on a plurality of storage devices.

- 12. (currently amended) The method of claim [[11]] $\underline{1}$ wherein the selected plurality of advertisements [[is]] are received within the media.
- 13. (currently amended) The method of claim [[11]] 1 wherein the selected plurality of advertisements [[is]] are received on a broadcast channel on which the media is also received.
- 14. (currently amended) The method of claim [[11]] <u>1</u> wherein the <u>selected</u> <u>plurality of</u> advertisements [[is]] <u>are</u> received on a separate broadcast channel from the media.
- 15. (previously presented) The method of claim 1 further comprising storing the selected advertisement.
- 16. (previously presented) The method of claim 15 wherein the selected advertisement is stored on a single storage device.
- 17. (previously presented) The method of claim 15 wherein the selected advertisement is stored on a plurality of storage devices.

18. (currently amended) A method executed by at least one computer processor for providing metadata-selected advertisements, comprising:

receiving at user equipment a plurality of advertisements related to media;

receiving at the user equipment the media, metadata associated with the media and containing a description of the media, and metadata associated with [[a]] the plurality of advertisements related to the media; processing the metadata;

comparing at the user equipment the metadata associated with the media with the metadata associated with the plurality of advertisements related to the media;

selecting <u>at the user equipment</u> one of the plurality of advertisements related to the media based on the comparison; and

displaying the selected advertisement.

- 20. (previously presented) The method of claim 18 wherein the metadata associated with the media and the metadata associated with the plurality of advertisements are received on a broadcast channel on which the media is also received.
- 21. (previously presented) The method of claim 18 wherein the metadata associated with the media and the metadata associated with the plurality of advertisements are received on a separate broadcast channel from the media.

- 22. (previously presented) The method of claim 18 further comprising storing the metadata associated with the media and the metadata associated with the plurality of advertisements.
- 23. (previously presented) The method of claim 22 wherein the metadata associated with the media and the metadata associated with the plurality of advertisements are stored on a single storage device.
- 24. (previously presented) The method of claim 22 wherein the metadata associated with the media and the metadata associated with the plurality of advertisements are stored on a plurality of storage devices.

- 26. (currently amended) The method of claim [[25]] 18 wherein the selected plurality of advertisements [[is]] are received within the media.
- 27. (currently amended) The method of claim [[25]] 18 wherein the selected plurality of advertisements [[is]] are received on a broadcast channel on which the media is also received.
- 28. (currently amended) The method of claim [[25]] 18 wherein the metadata associated with the media and the metadata associated with the plurality of advertisements are received on a separate broadcast channel from the media.

- 29. (previously presented) The method of claim 18 further comprising storing the selected advertisement.
- 30. (previously presented) The method of claim 29 wherein the selected advertisement is stored on a single storage device.
- 31. (previously presented) The method of claim 29 wherein the selected advertisement is stored on a plurality of storage devices.
- 32. (currently amended) A method executed by at least one computer processor for providing metadata-selected advertisements, comprising:

receiving <u>at user equipment</u> media, metadata associated with the media and containing a description of the media, and metadata associated with a plurality of advertisements related to the media;

downloading to the user equipment the plurality of advertisements related to the media;

processing the metadata;

comparing <u>at the user equipment</u> the metadata associated with the media with the metadata associated with the plurality of advertisements related to the media;

selecting <u>at the user equipment</u> one of the plurality of advertisements related to the media based on the comparison;

downloading the selected advertisement; and displaying the selected advertisement.

- 33. (currently amended) The method of claim 32 wherein the metadata associated with the media and the metadata associated with the plurality of advertisements further contain [[a]] at least one source address.
- 34. (currently amended) The method of claim 33 wherein at least one of the at least one source address is a Uniform Resource Locator.
- 35. (currently amended) The method of claim 33 wherein at least one of the at least one source address is a telephone number.
- 36. (currently amended) A method executed by at least one computer processor for providing metadata-selected advertisements, comprising:

receiving at user equipment a plurality of advertisements related to media;

receiving at the user equipment the media,
metadata associated with the media and containing a
description of the media, and metadata associated with
[[a]] the plurality of advertisements related to the media;
processing the metadata;

comparing at the user equipment the metadata associated with the media with the metadata associated with the plurality of advertisements related to the media;

selecting at the user equipment one of the plurality of advertisements related to the media based on the comparison;

monitoring the selected advertisement; collecting data on the selected advertisement; and

recording the data.

37. (currently amended) A system for providing metadata-selected advertisements comprising user equipment comprising:

[[a]] at least one receiver that:

receives at the user equipment media

containing at least one object, metadata associated with

the at least one object and containing a description of the

at least one object, and metadata associated with [[a]] the

plurality of advertisements related to the at least one

object; and

receives at the user equipment the plurality of advertisements related to the at least one object;

a viewing device that displays the media and the at least one object;

a user input device that receives a user selection of <u>one of</u> the <u>at least one</u> object displayed on the viewing device; and

a processor operative to: process the metadata associated with the object selected by the user; compare at the user equipment the metadata associated with the object selected by the user with the metadata associated with the plurality of advertisements related to the object; select at the user equipment one of the plurality of advertisements related to the object based on the comparison; and display the selected advertisement on the viewing device.

38-39. (cancelled)

- 40. (currently amended) The system of claim 37 wherein the <u>at least one</u> receiver receives the metadata associated with the <u>at least one</u> object and the metadata associated with the plurality of advertisements on a broadcast channel on which the <u>at least one</u> receiver also receives the media.
- 41. (currently amended) The system of claim 37 wherein the <u>at least one</u> receiver receives the metadata associated with the <u>at least one</u> object and the metadata associated with the plurality of advertisements on a different broadcast channel from the media.
- 42. (currently amended) The system of claim 37 further comprising [[a]] at least one storage unit that stores metadata associated with the at least one object and the metadata associated with the plurality of advertisements.
- 43. (currently amended) A system for providing metadata-selected advertisements comprising user equipment comprising:

a viewing device;

[[a]] the plurality of advertisements; and

[[a]] at least one receiver that:

receives at the user equipment a

plurality of advertisements related to media; and

receives at the user equipment the

media, metadata associated with the media and containing a

description of the media, and metadata associated with

a processor operative to: process the metadata associated with the media; compare at the user

<u>equipment</u> the metadata associated with the media with the metadata associated with the plurality of advertisements; select <u>at the user equipment</u> an advertisement related to the media from the plurality of advertisements based on the comparing; and display the selected advertisement on the viewing device.

- 45. (currently amended) The system of claim 43 wherein the <u>at least one</u> receiver receives the metadata associated with the media and the metadata associated with the plurality of advertisements on a broadcast channel on which the receiver receives the media.
- 46. (currently amended) The system of claim 43 wherein the <u>at least one</u> receiver receives metadata associated with the media and the metadata associated with the plurality of advertisements on a different broadcast channel from the media.
- 47. (currently amended) The system of claim 43 further comprising [[a]] at least one storage unit that stores the metadata associated with the media and the metadata associated with the plurality of advertisements.
- 48. (currently amended) A system for providing metadata-selected advertisements comprising <u>user equipment</u> comprising:
 - a viewing device;
- a receiver that receives <u>at the user</u> equipment media, metadata associated with the media and

containing a description of the media, and metadata associated with a plurality of advertisements related to the media; and

a processor operative to:

download to the user equipment the plurality of advertisements related to the media;

process the metadata associated with the media; compare at the user equipment the metadata associated with the media with the metadata associated with the plurality of advertisements related to the media; select at the user equipment one of the plurality of advertisements related to the media based on the comparison;

download the selected advertisement based on the metadata: and

display the selected advertisement on the viewing device.

- 50. (previously presented) The system of claim 48 wherein the receiver receives the metadata associated with the media and the metadata associated with the plurality of advertisements on a broadcast channel on which the receiver also receives the media.
- 51. (previously presented) The system of claim 48 wherein the receiver receives metadata associated with the media and the metadata associated with the plurality of advertisements on a different broadcast channel from the media.

- 52. (currently amended) The system of claim 48 further comprising [[a]] at least one storage unit that stores the metadata associated with the media and the metadata associated with the plurality of advertisements.
- 53. (currently amended) A system for providing metadata-selected advertisements comprising:

[[a]] <u>at least one</u> receiver that:

receives at user equipment a

plurality of advertisements related to media; and

receives at the user equipment the media, metadata associated with the media and containing a description of the media, and metadata associated with [[a]] the plurality of advertisements related to the media; [[and]]

a storage device; and

a processor operative to: process the metadata associated with the media; compare at the user equipment the metadata associated with the media with the metadata associated with the plurality of advertisements related to the media; select at the user equipment one of the plurality of advertisements related to the media based on the comparison;

collect data relating to the selected advertisement; and record the collected data on the storage device.

54. (new) The method of claim 1 further comprising periodically receiving the plurality of advertisements from one or more remote locations.

- 55. (new) The method of claim 1 further comprising receiving the plurality of advertisements from one or more remote locations in response to requests made by the user equipment.
- 56. (new) The method of claim 1 further comprising polling one or more remote location for the plurality of advertisements.
- 57. (new) The method of claim 1 further comprising storing the plurality of advertisements at the user equipment.
- 58. (new) The method of claim 2 further comprising ordering one or more items displayed by the selected advertisement.
- 59. (new) The system of claim 37 wherein the at least one receiver periodically receives the plurality of advertisements from one or more remote locations.
- 60. (new) The system of claim 37 wherein the at least one receiver receives the plurality of advertisements from one or more remote locations in response to requests made by the processor.
- 61. (new) The system of claim 37 wherein the processor is configured to poll one or more remote locations for the plurality of advertisements.

- 62. (new) The system of claim 37 further comprising at least one storage unit for storing the plurality of advertisements at the user equipment.
- 63. (new) The system of claim 37 wherein the processor is operative to order one or more items displayed by the selected advertisement.
